

Case Study

Client Ashe Construction Ltd
Location Stifford Primary School, Grays
Project New Build School Facility & Extensions

EHW assisted Ashe with the two main phases of work which included the creation of a single storey new build detached teaching facility to provide an additional four classrooms for the youngest entrants to the school. Bright colours were selected for the external render with contrasting cut-out signage above each class entrance.

Two extensions provided a further three classrooms for older primary school children, and drama teaching and performance space was also added to the existing music hall. School offices and meeting rooms were completely re-planned to suit the relocated main entrance and reception, and the main areas were all completely refurbished to improve the general environment for the students and the staff.
